

COME HOME TO NATURAL LATEX GLOVES

Were you a **former** latex glove user who has switched to vinyl or nitrile because of fear of sensitization by latex proteins?

Consider this:

It is now safe to return to your **OLD LOVE** because:

- a. Latex gloves are now lower in latex proteins as a result of improved manufacturing process that washed off most of the protein from the glove surface. Therefore, the risk of becoming sensitized is drastically reduced.
- b. Latex gloves now have less powder, which is still a preferred donning aid to help you put on your gloves quickly, accurately, and without tearing. This, combined with lower protein, means less aerosolizing, means less likelihood of inhaling airborne latex protein.
- c. Latex gloves with powder as donning agent are still a practical choice. You probably turned away from powdered gloves because of fear of inhaling latex proteins but because of the above improvements as well as the frustration you encountered in putting on synthetic gloves that has poor elasticity and are tight fitting, you can make a safe re-evaluation of this 'classic' gloves that are re-invented for your safety needs.
- d. Latex gloves are now made with improved cosmetic features such as texturing, varying degree of elasticity, fragrance, color and flavor to suit the tastes and needs of different usage environment.
- e. Latex gloves are preferred because that are made from renewable natural resource and are more biodegradable than synthetic gloves.
- f. Overall, it is undeniable that natural rubber is the superior material for the fabrication of protective gloves from aspects of impermeability to microorganisms, lower incidence of pinholes, and, much more comfortable to wear as well as less harmful to the environment.

When you use gloves made from natural rubber, you contribute positively to these areas:

- i) Supporting the natural rubber cultivation industry, which enhances the greening of the earth that help reduce global warming;
- ii) Provide continued employment opportunities to the communities in countries that depend on NR cultivation for their livelihood;
- iii) Affirm the belief that natural resources are more energy efficient and more economical than synthetics;
- iv) Your decision will drive the glove manufacturing industry towards better gloves for you.

It is OK to come home to a product that you once loved, but turned away because of allergy that affect some users, that you became concerned may affect you. This may, or may not happen, but for the overall peace of mind, and safety of the glove users worldwide, responsible glove manufacturers like ourselves have put together glove manufacturing technology, safe practices, and quality standards, to reassure you that **Natural Latex Gloves are still the Better Gloves**.
